

USE OF A LOW MOLECULAR WEIGHT SULFATED POLYSACCHARIDE
FOR PRODUCING A MEDICINAL PRODUCT WITH ACTIVITY AGAINST
VASCULAR THROMBOSIS

5

Abstract of the Invention

The invention concerns the use of a sulphated
polysaccharide capable of being obtained by radical
10 depolymerization of a raw fucan derived from
Pheophyceae, said polysaccharide having a molar mass
not more than 10.000 g/mol, to obtain a medicine for
preventing or treating vascular thrombosis, in
particular venous thrombosis, arterial thrombosis and
15 arterial restenosis.
